

## Assignment 1

Define class Countries. This should have an array of strings as data member.

Accept data from user. (Ask user for number of countries he want to enter. Array can be created of the size 10)

Alphabetically sort the array (use comparison operators and functions)

Display the array.

## Assignment 2

Write a program to read several city names from keyboard and display only those starting with "B" or "C"

## Assignment 3

Write a program that will read a line of text (containing multiple words) and replace all blank spaces with \_

## Assignment 4

Write a program to read the following text and count the number of times "It" appears in it.

"It is new. It is singular. It is simple"

## Assignment 5

String s1("123456789")

Output –

				1					
			2	3	2				
		3	4	5	4	3			
	4	5	6	7	6	5	4		
5	6	7	8	9	8	7	6	5	

## Assignment 6

```
class employee
{
    string name;
    int age;
    float salary;
};
//name contains firstname lastname - name can contain multiple blank spaces,
//but the part before the first blank space is considered as first name
//accept data from user
//show the employee list in the following format
```

First Name	Last Name	Age	Salary
------------	-----------	-----	--------

---
